Revised October 8, 2023

Contents: 43 Supplemental Figures (Figs. S1-43).
Figure S1. Number of discrete MHW and MCW events per 31 years (average of 1970-2000, 2020-2050 and 2070-2100). (a,g) CESM2; (b,h) CanESM5; (c,i) GFDL-SPEAR; (d,j) MIROC6; (e,k) CESM1; (f,l) CanESM2; (g,o) MPI-ESM-LR. The number in the upper right of each panel denotes the average value over the global ocean.
Figure S2. As in Fig. S1 but for ENSO-neutral events.
Figure S3. Composite MHW and MCW intensity (°C) during 1950-2020 from the 50-member CanESM5 Large Ensemble and Observations. (a,g) Ensemble average; (b,h) Observations; (c,i) Ensemble average minus Observations; (d,j) Ensemble maximum; (e,k) Ensemble minimum; (f,l) Ensemble maximum minus minimum. Gray shading in (c,i) indicates that observations lie within the 5th-95th percentile range of the CanESM5 Large Ensemble.
Figure S4. As in Fig. S3 but for the 30-member GFDL-SPEAR Large Ensemble.
Figure S5. As in Fig. S3 but for the 50-member MIROC6 Large Ensemble.
Figure S6. As in Fig. S3 but for the 40-member CESM1 Large Ensemble.
Figure S7. As in Fig. S3 but for the 50-member CanESM2 Large Ensemble.
Figure S8. As in Fig. S3 but for the 100-member MPI-ESM-LR Large Ensemble.
Figure S9. Composite MHW and MCW duration (months) during 1950-2020 from the 50-member CanESM5 Large Ensemble and Observations. (a,g) Ensemble average; (b,h) Observations; (c,i) Ensemble average minus Observations; (d,j) Ensemble maximum; (e,k) Ensemble minimum; (f,l) Ensemble maximum minus minimum. Gray shading in (c,i) indicates that observations lie within the 5th-95th percentile range of the CanESM5 Large Ensemble.
Figure S10. As in Fig. S9 but for the 30-member GFDL-SPEAR Large Ensemble.
**Figure S11.** As in Fig. S9 but for the 50-member MIROC6 Large Ensemble.
Figure S12. As in Fig. S9 but for the 40-member CESM1 Large Ensemble.
Figure S13. As in Fig. S9 but for the 50-member CanESM2 Large Ensemble.
Figure S14. As in Fig. S9 but for the 100-member MPI-ESM-LR Large Ensemble.
**Figure S15.** Composite MHW and MCW intensity (°C) from the 50-member CanESM5 Large Ensemble during (a,f) 1970-2000, (b,g) 2020-2050, (c,h) 2070-2100, and differences (d,i) 2020-2050 minus 1970-2000, and (e,j) 2070-2100 minus 1970-2000. Note that the color bar range is twice as large in a-c, f-h compared to d-e, i-j. Gray shading in d-e, i-j indicates that the differences are not statistically significant according to the False Discovery Rate applied to a 2-sided t-test at the 95% confidence level.
Figure S16. As in Fig. S15 but for the 30-member GFDL-SPEAR Large Ensemble.
Figure S17. As in Fig. S15 but for the 50-member MIROC6 Large Ensemble.
Figure S18. As in Fig. S15 but for the 40-member CESM1 Large Ensemble.
Figure S19. As in Fig. S15 but for the 50-member CanESM2 Large Ensemble.
Figure S20. As in Fig. S15 but for the 100-member MPI-ESM-LR Large Ensemble.
**Figure S21.** Composite MHW and MCW duration (months) from the 50-member CanESM5 Large Ensemble during (a,f) 1970-2000, (b,g) 2020-2050, (c,h) 2070-2100, and differences (d,i) 2020-2050 minus 1970-2000, and (e,j) 2070-2100 minus 1970-2000. Note that the color bar range is twice as large in a-c, f-h compared to d-e, i-j. Gray shading in d-e, i-j indicates that the differences are not statistically significant according to the False Discovery Rate applied to a 2-sided t-test at the 95% confidence level.
**Figure S22.** As in Fig. S21 but for the 30-member GFDL-SPEAR Large Ensemble.
Figure S23. As in Fig. S21 but for the 50-member MIROC6 Large Ensemble.
Figure S24. As in Fig. S21 but for the 40-member CESM1 Large Ensemble.
Figure S25. As in Fig. S21 but for the 50-member CanESM2 Large Ensemble.
Figure S26. As in Fig. S21 but for the 100-member MPI-ESM-LR Large Ensemble.
**Figure S27.** Composite MHW and MCW intensity (°C) differences between 2020-2050 and 1970-2000 for the ensemble-mean of each model Large Ensemble: (a,h) CESM2; (b,i) CanESM5; (c,j) GFDL-SPEAR; (d,k) MIROC6; (e,l) CESM1; (f,m) CanESM2; (g,n) MPI-ESM-LR. Gray shading indicates that the differences are not statistically significant according to the False Discovery Rate applied to a 2-sided t-test at the 95% confidence level. The number in the upper right of each panel denotes the fractional area (%) of significant differences (e.g., non-gray areas). Shading in panels (h,p) show locations where at least two-thirds of the models show statistically significant values (pink for positive and blue for negative); the number in the upper right denotes the fractional area (%) of the pink and blue shading.
Figure S28. As in Fig. S27 but for composite MHW and MCW duration (months).
Figure S29. Composite ENSO-neutral MHW and MCW intensity (°C) from the 50-member CanESM5 Large Ensemble during (a,f) 1970-2000, (b,g) 2020-2050, (c,h) 2070-2100, and differences (d,i) 2020-2050 minus 1970-2000, and (e,j) 2070-2100 minus 1970-2000. Note that the color bar range is twice as large in a-c, f-h compared to d-e, i-j. Gray shading in d-e, i-j indicates that the differences are not statistically significant according to the False Discovery Rate applied to a 2-sided t-test at the 95% confidence level.
Figure S30. As in Fig. S29 but for the 30-member GFDL-SPEAR Large Ensemble.
Figure S31. As in Fig. S29 but for the 50-member MIROC6 Large Ensemble.
**Figure S32.** As in Fig. S29 but for the 40-member CESM1 Large Ensemble.
Figure S33. As in Fig. S29 but for the 50-member CanESM2 Large Ensemble.
Figure S34. As in Fig. S29 but for the 100-member MPI-ESM-LR Large Ensemble.
Figure S35. Composite ENSO-neutral MHW and MCW duration (months) from the 50-member CanESM5 Large Ensemble during (a,f) 1970-2000, (b,g) 2020-2050, (c,h) 2070-2100, and differences (d,i) 2020-2050 minus 1970-2000, and (e,j) 2070-2100 minus 1970-2000. Note that the color bar range is twice as large in a-c, f-h compared to d-e, i-j. Gray shading in d-e, i-j indicates that the differences are not statistically significant according to the False Discovery Rate applied to a 2-sided t-test at the 95% confidence level.
**Figure S36.** As in Fig. S35 but for the 30-member GFDL-SPEAR Large Ensemble.
Figure S37. As in Fig. S35 but for the 50-member MIROC6 Large Ensemble.
Figure S38. As in Fig. S35 but for the 40-member CESM1 Large Ensemble.
Figure S39. As in Fig. S35 but for the 50-member CanESM2 Large Ensemble.
Figure S40. As in Fig. S35 but for the 100-member MPI-ESM-LR Large Ensemble.
**Figure S41.** Composite ENSO-neutral MHW and MCW intensity (°C) differences between 2020-2050 and 1970-2000 for the ensemble-mean of each model Large Ensemble: (a,h) CESM2; (b,i) CanESM5; (c,j) GFDL-SPEAR; (d,k) MIROC6; (e,l) CESM1; (f,m) CanESM2; (g,n) MPI-ESM-LR. Gray shading indicates that the differences are not statistically significant according to the False Discovery Rate applied to a 2-sided t-test at the 95% confidence level. The number in the upper right of each panel denotes the fractional area (%) of significant differences (e.g., non-gray areas). Shading in panels (h,p) show locations where at least two-thirds of the models show statistically significant values (pink for positive and blue for negative); the number in the upper right denotes the fractional area (%) of the pink and blue shading.
Figure S42. As in Fig. S41 but for duration (months).
Figure S43. Ratio of mid-century changes (2020-2050 minus 1970-2000) in MHW and MCW composite intensity due to changes in variability divided by that due to changes in variability-plus-mean state for: (a,h) CESM2; (b,i) CanESM5; (c,j) GFDL-SPEAR; (d,k) MIROC6; (e,l) CESM1; (f,m) CanESM2; (g,n) MPI-ESM-LR. Panels h,p show the multi-model ensemble (MME) average. The number in the upper right of each panel denotes the fractional area (%) of values within the range -0.1 to +0.1.
